

A close-up, artistic photograph of a blue mesh fabric, likely a medical product, with a dark background. The mesh is composed of small, interconnected fibers, creating a grid-like pattern. The lighting highlights the texture and depth of the material, with some areas in sharp focus and others blurred.

Continence Health
Family of solutions

The Ethicon Womens Health & Urology Contenance Family of Products is designed to give you and your patients the choice you deserve when selecting the right procedure for the treatment of Urinary Incontinence.

The GYNECARE Contenance Family has recently been complemented by the addition of BULKAMID™, a Urethral Bulking System performed under endoscopic control. The BULKAMID™ Hydrogel is a proven material that offers patients a treatment option even if they are not suitable for a sling repair.

Ethicon Womens Health & Urology, the women's health division of Johnson & Johnson Medical Limited, is dedicated to providing new solutions to common gynaecologic health problems and providing valuable, easy-to-understand information so that each woman can weigh her options and, with her clinician, make an informed decision.

We are committed to constantly seeking to evolve in order that we can provide minimally invasive technologies that help patients experience a reduction in pain, the length of procedure and recovery, and ultimately less emotional stress compared with existing practices.

Since its inception, Ethicon Womens Health & Urology has been dedicated to high quality professional education for our clinicians. Creating world class educational tools, models and preceptor networks, Ethicon Womens Health & Urology has educated thousands of clinicians worldwide.

More than that Ethicon Womens Health & Urology is dedicated to constant re-training programs to keep clinicians up to date with the latest procedures, products and surgical developments. With the use of telesurgery, webcasts, anatomy laboratories and operating theatres professionals can gain instant access to cutting edge professional education.

By leveraging the latest advances in medical technology, Ethicon Womens Health & Urology will strive to meet its mandate to provide the healthcare community with new choices, and women with choices that enrich their lives.

Gynecare TVT™

A strong heritage of success and safety proven across a decade of clinical data.¹

Dependable
Reliable
Elegant
Proven

A close-up photograph of a blue mesh strip and two white sutures. The sutures are positioned as if they are about to be used to secure the mesh. The background is dark, making the white and blue elements stand out.

Gynecare TVTO™

Designed to deliver better safety and sustainable efficacy proven over 3 years of clinical data.²

Precise
Safe
Distinctive

A close-up photograph of a blue mesh strip being held by a hand. The mesh is shown in a way that highlights its texture and flexibility. The background is dark, emphasizing the blue color of the mesh.

Gynecare TVT SECUR™

Designed for versatility, greater patient comfort and less implanted mesh.
